Detailed Action

Allowable Subject Matter

Claim 29 is allowed over prior art of record. The following is an examiner's statement of reasons for allowance:

The art of record did not teach or suggest the claim taken as a whole and particular the limitation pertaining to " a first common terminal group commonly assigned in the first connecting device based on a predetermined terminal table, the first common terminal group connecting front-end circuits provided in the external substrates and that are compliant with the broadcasting systems; a second common terminal group commonly assigned in the first connecting device based on the predetermined terminal table, the second common terminal group connecting a plurality of types of CA modules having terminal specifications including input and output directions of one of signal types and signals different from each other; wherein the interface device comprises at least one set of a first input buffer, a first output buffer, and a second input buffer, the first input buffer including an input terminal connected to one terminal of the second common terminal group, and an output terminal connected to the decoding device, the first output buffer includes an input terminal connected to the control device".

With respect to independent claim 29, Guenebaud et al disclose in fig.1, interface module 1 having a plurality of slots for receiving smart cards; the interface module presented here could be integrated into a digital television signal decoder, 0075; the use

Art Unit: 2425

of decoders capable of receiving signals corresponding to television programs and of transmitting them to a television set after processing into an intelligible format, 0005; the processing means 9 preferably include a processor for executing the conditional access systems 11, 0059.

And Marlowe et al disclose standard select controls 8 are used to program the sync generator for the generation of a specific television standard. Conductor 14 is used to select either a 625-line frame or a 525-line frame. Conductor 16 is used to select either the PAL, NTSC, SECAM or PAL-M television standard, col.4, lines 1-6; table shows that a logical zero on conductor 14 will select a 525-line frame, while a logical one on conductor 14 will select a 625-line frame. The PAL or the NTSC standard is selected by applying a logical one to conductor 16, while the application of a logical zero selects the PAL-M or SECAM television standard, col.4, lines 6-22.

And Oh et al disclose including a lookup table and a plurality of logic sets, each said logic sets operable to interface with a certain predefined expansion card type, said state machine accepting as input signals a plurality of predetermined card detection and voltage selection signals, col.3, lines 36-41+; North Bridge" logic 24 provides communication between the processor 26 and the bus 20, col.4, lines 40-41; see fig.2, element 28, power IC; Power IC chip 28 supplies the correct voltages (as determined by the card type inserted into Socket A or B) to the pins of the PC Card connector. Once the type of card is detected based on the PC Card definitional table of FIG. 5, discussed

Art Unit: 2425

below, chip 28 supplies the appropriate voltage for that card type, col.4, lines 49-54; col.3, lines 36-46;col.5, lines 5-14-45+.

And Hust et al disclose dual buffer, the system includes a plurality of buffers for storing encoded video data representing images of video programs conveyed on a corresponding plurality of video channels. A processor initiates switching to decode a program conveyed on a selected one of the plurality of video channels in response to a user channel selection input,col.2, lines 30-39+.

But Guenebaud in view of Marlowe further in view of Hurst and any of cited references did not teach or suggest, alone or in combination the feature of “a first common terminal group commonly assigned in the first connecting device based on a predetermined terminal table, the first common terminal group connecting front-end circuits provided in the external substrates and that are compliant with the broadcasting systems; a second common terminal group commonly assigned in the first connecting device based on the predetermined terminal table, the second common terminal group connecting a plurality of types of CA modules having terminal specifications including input and output directions of one of signal types and signals different from each other; wherein the interface device comprises at least one set of a first input buffer, a first output buffer, and a second input buffer, the first input buffer including an input terminal connected to one terminal of the second common terminal group, and an output terminal connected

Art Unit: 2425

to the decoding device, the first output buffer includes an input terminal connected to the control device” as recited in combination with other features of independent claim 29.

The dependent claims 30, 32, 33-49 are allowed because are further limit independent/parent claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance”.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Marlowe et al (4169659) disclose Multiple standard television sync generator.

Guenebaud et al (20030012377) disclose interface module and decoder for host.

Oh et al (6470284) disclose Integrated PC card host controller for the detection and operation of a plurality of expansion cards.

Hurst et al(6985188) disclose Video decoding and channel acquisition system.

Paskins et al(6516465) Digital video receiver, a conditional access module and a method of transmitting data there between.
